(54) Title: **FENCING AND FENCING MOUNTINGS**

(57) Abstract: The invention provides a temporary fence including a barrier assembly comprising one or more posts (103), one or more fence panels (101) mounted thereon and one or more anchors (120) to anchor the posts consisting of two elements (112) that have a cleft (109) between them when assembled, there are also anchors (913) having a first post mounting (921) for the post of a first fence and a spaced apart second mounting (922) for a post of a second fence. Also there is a mounting bracket mounted on a post (916) of a first fence for receiving an upper portion of a second fence (920) and with attachment means at its distal end (924) from the first post such that when assembled the upper attached portion of the second fence is disposed generally vertically above a base portion of the second fence. There is further provided a mounting device for mounting a fence to a fence post including a main body (970) with an attachment (972) on it to which a fence can be releasably secured this device also including a releasable clamp (84, 85) attachable to a post so that at least a portion of the fence may be received in the clamp and be releasably retained adjacent the post.
